

Catalog 2019

...authentic garden decoration

since 2001

Since 2001

Selamat Datang! Welcome

In this catalogue we have taken care in our compilation, streamlined and compact to present our most beautiful and successful articles about Asiastyle in the garden:

A well-arranged bestseller catalog that offers you many ideas for your garden project. Your local dealer will be pleased to advise you on the selection and implementation.

Asian-inspired garden design is the theme we have dedicated ourselves to with „body and soul“ since our first trip to Indonesia in 2001. If you want to visit us in Lotte, we will show you what inspires us every single day.

Enjoy your visit with a glass of tea, a specialty coffee and unique pieces for the garden and the house.

Alternatively take a virtual tour and discover here something special and unique. It does not matter if you plan your discovery through the catalogue, through a virtual or personal visit: we look forward to seeing you!

Have fun leafing!

Garden decoration made
of stone

from classic to modern

You want to make your garden more beautiful?
Discover the many ways to decorate with our wells, troughs and planters made of natural stone. Every one of our products is uniquely hand-made! Create your own little outdoor paradise with decoration made of high-value crafted or pressed stone. Bring life to even the dullest corner in your garden, and give it its very own character with solid stools, tables, benches and chairs.

Wells made of natural stone

A feeling of eternity: natural stone crafted into beautiful objects.

Who does not know, the charm of old natural stone wells on the village square? Even though wells have not been necessary as a social meeting point for water supply since the introduction of tap water, they still exert a tre-

mendous attraction in cities and villages with their cascades and fountains. Water meets natural stone - the idea of a refreshing, clear mountain spring: Get this feeling of life in your garden!

Well¹			
well model „Genua“, complete set including a pump, tap, copper tubing, drilled holes etc., approx. 120 cm H natural stone (crafted stone), stonemason's work			
article no.	approx. size approx. weight	RRP	
CST-WS-120NA	80 x 70 x 120 cm 450 kg	1.398,00 €	

¹ For objects made of crafted stone that are used in combination with water we recommend hydrophobicity for the stones.

Wall-mounted well¹
wall-mounted well model "Venice", complete set including a pump, tap, copper tubing, rilled holes etc., approx. 120 cm and 160 cm H | natural stone (crafted stone), stonemason's work

CST-WS3A-120NA	75 x 70 x 120 cm 450 kg	1.279,00 €

Well¹
well model "Bozen", complete set including a pump, tap, copper tubing, drilled holes etc., approx. 85 cm H | natural stone (crafted stone), stonemason's work

article no.	approx. size approx. weight	RRP
CST-WS3-080NA	70 x 60 x 80 cm 160 kg	745,90 €
CST-WS3-120NA	50 x 75 x 120 cm 450 kg	1.279,00 €

¹ For objects made of crafted stone that are used in combination with water we recommend hydrophobicity for the stones.

Planters and troughs

Natural stone vessels underline the individual taste of the garden and the owner. The solid troughs, bowls and planters made of crafted stone are not only frost resistant, but their grey-greenish colour fits into every garden. No matter what colourful arrangements you decide to plant, you can't go wrong with these!

The beauty of a hand-cut sculpture is not only in the eye of the beholder, but also in its imperfection. We would like to point out that the sculpture may have flaking in the base area, for example. Inclusions of different colored rock types are a testimony to their uniqueness. Just as few people are perfect, hand-cut statues have “rough edge“, which is exactly what makes their charm.

Asian stone art

With the import of a large Buddha bust from Ubud (Bali) in the Year 2001 began our company history. The first years were mainly dedicated to the theme of “beautiful Buddha statues”. For this reason, you will find one of the largest ranges of handmade Buddha sculptures in Germany. Part of this is presented in this catalog. Whether from boulder stone, basanite or hand-finished stone casting: our special focus is still on the selection of beautiful specimens. This in combination with the right materials is our guarantee that you enjoy your artwork for a long time.

¹ The colorations vary and may fade as a result of weathering.

Khmer heads perfectly staged

Our Khmer heads are impressive in their timeless mystical charisma, whose role models can be found in the Cambodian temples of Angkor Wat. It gets really impressive with permanently running water, which flows softly over the face and provides a wonderfully lively picture. An attractive lighting underlines the whole thing. A fascinating sight.

Japanese Buddha “Kamakura”

In Japan, the two most famous Buddha statues (Daibutsu): in Nara and Kamakura. The latter gave us the inspiration for our Japanese Buddha. The biggest visual difference to the Indian Buddha and thus the best recognition factor, is the loose over both shoulders hanging robe and the position of the thumb.

River Stone -
Our Master
class

The sculptures of river stone can be seen at first glance the high quality. The hardness of this granite-like rock makes a particularly detailed elaboration possible. The artists can thus prove their abilities even more and transfer them to the objects. The sculptures thus gain more power and expression, which makes them appear interesting to the viewer over a longer period of time.

MOAI

The stone colossi of Easter Island

The imposing stone giants of Easter Island are a fascinating testimony to a bygone culture. They were carved from volcanic tufa 1 to 2 millennia ago and worshiped divine ancestors. The giant figures are still considered one of the greatest myths of our humanity. No matter if you choose the massive stone cast or the partially hollow cast stone giants, the Moai will enrich your garden.

Rigid fence element

Model “Surabaya”

The bamboo fence elements from the series Surabaya is rigidly connected. That is, we have elements of tree-bus tubes that have been drawn at different heights (levels) on a bamboo or wooden axis - similar to beads on a string. In most cases, with 180 cm high elements, we have three axis planes that are rigidly connected to this bamboo or wood axis and thus provide sufficient rigidity (stability). The two outer bamboo poles are fixed on all levels to the bamboo or wood axis by means of bamboo dowels.

Material Science

BASANIT NATURE From this lava stone most of the sculptures are made by our artists. The clay minerals contained in the rock, mostly chlorides, give the basanite its characteristic greenish shimmering color. With a little luck, fragments of other types of rock can also be found in the raw material. Basanit sculptures are frost resistant, but not saltwater resistant. Tausalz dissolves the structure of the stone in basalts. During the frost period you should make sure that the figure is not in the water, but on a gravel bed.

RIVER STONE Also called Riverstone. This rock is to be assigned to the same group of rocks as granite, thus still many times denser and harder than lava stone. To work on the river stone requires more strength and skill. Due to the hardness of the rock, the artists can elaborate this much more detailed and thus finer.

Achieve results. By the way, we can also provide the boulder with an antique finish. During the frost period you should make sure that the figure is not in the water, but on a gravel bed.

STONEWALK A handmade original provides the template here. It will create a mold, which is then poured with artificial stone. After drying, the mold is carefully removed and the blank reworked. Finally, the Antikfinish is applied by hand. The result is absolutely authentic sculptures at fair prices. During the frost period you should take care that the figure is not in the water, but on a gravel bed.

LAVASTEIN - andesite Borobudur, one of the largest Buddhist temples in Southeast Asia, was built from this rock. Its greyish appearance and larger pores, which are responsible for a rough surface, only slightly differentiate the lava stone from the basanite. It is frost resistant and can also contain fragments of other types of rock, which is typical of a volcanic rock. During the frost period you should make sure that the figure is not in the water, but on a gravel bed.

GRP Glass-fiber reinforced plastic, short GRP, is a fiber-plastic composite of a plastic and glass fibers. Glass fiber reinforced plastics are a very high quality fiber-plastic composite.

GRP has excellent corrosion behavior even in aggressive environments. This makes it a suitable material for water features of any kind.

Hydrophobilize

The hydrophobing is a water-repellent preservation measure. Stones that come into permanent contact with water, such as our wells or stone bowls, should be struck with a suitable medium. The hydrophobizing agent occupies the inner pore and capillary surfaces, making them water repellent. The pores and capillaries are not closed, i. the diffusibility (breathability) of the stone remains virtually unchanged. In trade, the means of hydrophobing are also found under the term „Farbvertiefer“.

BAMBOO For outdoor use, we recommend an oil-based protective paint. The use of a glaze or a care oil reduces the cracking of the bamboo in the dried state and especially by large climatic variations. However, these cracks do not change the stability of a bamboo cane. It is best to clean the bamboo in a dry weather period so that it dries completely and then apply the paint. Alternatively, you can sand the bamboo and then paint it. Repeat this care and preservation measure approximately every 1-2 years. If you drill your bamboo pipes, water that has penetrated can run off. Avoid large variations in temperature and slowly adjust your indoor bamboo product to the warm room temperature.

We can not give a guarantee on bamboo poles or pipes. It is a natural product in which the following points (not exhaustive) are not grounds for complaint:

1. Bamboo tubes can rupture due to temperature fluctuations. It can form fine cracks up to the gap.
2. Color differences may occur. Any fire are the results of the heat under which the bamboo poles were pulled straight after harvesting when needed straight.
3. Bamboo can have bumps and bends and are by nature not a standard straight bar.
4. The diameter of the bamboo poles is different. you rejuvenate from bottom to top. The design of the Diameter is made at the lower, thicker end of the bamboo pole. We have made both our length and diameter specifications to the best of our knowledge and belief. Nevertheless, it is about Ca. dimensions that may differ.

Stone sculptures

In a stone farming village in Indonesia, our workshops and artists create the unique sculptures that inspire us and our customers. These handmade single pieces are made from the rock Basanit, which is mined in a quarry and further processed by our manufactories. The basanite is a igneous rock, which receives a characteristic greenish color due to the contained minerals, mostly chlorides. The uneven nature of the surface is due to the formation of basanite. For these are fragments of other

types of rock, which were entrained in a volcanic eruption in the lava flow. If you prefer an optically darker and more even surface, our sculptures with the Antikfinish finishing are recommended. In this process, the surface is slightly colored, but this can wash off over time. Our basanite and boulder sculptures can be outdoors in any season, as they are absolutely weather and frost resistant.

Stone casting, hand-finished

Another very popular manufacturing process recently is the stone casting. Our sculptures made of cast stone are a handmade masterpiece as a template. From this original a shape is created, which is then poured with an artificial stone. After removing the mold, the blank is reworked by hand and colored. The result is a wonderfully authentic, detailed sculpture. The color may

fade over time and due to environmental influences. For some large format models, the core may remain hollow (hollow cast). This method reduces the weight of the objects by about half compared to natural stone objects of the same size: a real advantage. Of course, these sculptures are frost resistant.
